THE UK'S
MARKET LEADER
IN ACCESS &
SAFETY

SAFETY TESTING

We offer a variety of services and employ only the most qualified engineers in the industry. Regular in-house and external training enables our engineers to keep up to date with industry legislation.

Locally based teams ensure we are able to offer competitive pricing for all servicing jobs, while regionally based teams respond quickly to clients' requests. Our turnaround is normally less than one week from receipt of order to completion of the site visit.

We work closely with clients, offering full site surveys to ensure their needs are met and detailed prior to any works being carried out.

We can also ensure that we not only obtain the best pricing, but we can pass on quality products to our end clients at competitive prices, thus building better relationships with our customers and suppliers alike.

The certificates we provide are the most comprehensive in the industry, giving the client peace of mind and a high level of certainty that the equipment being used carries a valid test certificate.

In addition, the high-grade components and products we use in carrying out repairs and upgrades are sourced from key suppliers whose products are tested and certified to current legislation.

By ensuring we only use a few carefully selected suppliers with whom we work very closely, we ensure our products are consistent and of the highest quality available to the industry.

“Protecting
people,
property
and places”

SAFETY INSTALLATION

PTSG Access and Safety prides itself on delivering a creative solution from conception to completion on any access and safety requirements.

The company is made up of highly qualified staff with many years of experience in the industry. We pride ourselves on delivering excellence to our clients, offering peace of mind that you are in good hands. We also ensure each member has an in-depth knowledge of British Standards and legislation to ensure conformity.

The access solutions we offer include fall protection systems, handrail systems (both structurally affixed and freestanding), walkways, handrails, ladders and bespoke systems of individual and collective protection. We have nationwide coverage and provide solutions for buildings of all configurations, sizes and age.

PTSG Access and Safety is a Latchways® and Kalzip approved installer and has close working relationships with these suppliers.

Our fall protection installation department takes a holistic approach to providing access solutions which generally involve protecting operatives working on roof areas.

We provide a service which enables the client to achieve a full access strategy for operatives working at height. If consulted at an early stage, we can use our knowledge and expertise to advise on the best products to suit the requirements of the project.

Our wide range of fall arrest, fall restraint and access products allow us to design and install a safe and compliant system on any site, whether it is a new build, listed building or a site with challenging architecture and design features.

CRADLE MAINTENANCE

PTSG Access and Safety is the largest provider of maintenance services for permanently installed suspended access equipment in the UK, and we are the only provider with engineers based locally across the UK and Ireland.

We provide maintenance, inspection, testing and repair services for all types of equipment including building maintenance units, gantry systems, cradle systems, monorail systems and lifting equipment.

PTSG Access and Safety can cover all access requirements on all buildings and sites. From small internal systems to giant buildings with multiple external machines, we work on office blocks, airports, railway stations, shopping centres, residential towers and many other sites.

Our engineers maintain, inspect and test a wide variety of equipment. Principally, we work on suspended access equipment such as building maintenance units, cradle systems, monorails, gantries and travelling ladders, ensuring that they are safe to use. We also work on factory lifting equipment, hoists, runway beams, ladders, drop-down fire escapes and MEWPs.

We work on contracts ranging between £1k to more than £500k per year, from single buildings to portfolios with hundreds of individual sites. We carry out repairs from replacing a single limit switch to complete refurbishment and overhaul of even the largest machines. Our expertise in all areas of access and safety allows us to provide innovative solutions for even the most challenging projects.

CRADLE INSTALLATION

From roof-mounted machines to rope access eyebolts, from monorails to travelling gantries, PTSG Access and Safety is your one-stop shop for façade access solutions.

We have a UK network of installation and maintenance engineers giving us the scope and technical knowledge to design and deliver any project.

The definitive experts on facade access, PTSG Access and Safety provides a complete solution for all of your access requirements. From concept design to practical completion, PTSG Access and Safety can provide the services you require to achieve outstanding projects. Our knowledge base is second-to-none when it comes to façade access and fall protection. Whether you require guidance on current legislation, British or European Standards or assistance on scheme design, we're here to help.

We can assist in condition surveys of your ageing equipment and provide ongoing training to your operatives, ensuring safety comes first when working at height.

We are also able to assist in funding the purchase of your new equipment to ensure cost is not an issue when it comes to safety.
